Architect, engineer and artist **Hans-Walter Müller** (*1935 in Worms, Germany), may not have invented inflatable architecture, but he has devoted almost his entire life to it, creating an incredible oeuvre in the process. Throughout more than 50 years, he has been working with single-walled pneumatic structures, creating air volumes for uses as diverse as exhibitions, festivals, theater, and concert performances, but also for a temporary shopping centre or a reception building for refugees. For the past 50 years, he himself has lived in one of his volumes in La Ferté-Alais near Paris, which is at once a home, laboratory, and workshop for his experiments and constructions.

6.9.–10.9.2023

Eau&Gaz, Artist in Residency Eppan-Appiano
unibz – Faculty of Design and Art, Bozen-Bolzano

A Workshop hosted by Eau&Gaz Artist in Residency
in collaboration with unibz, museion & transart

“An inflatable structure is simply a skin which contains space, separating exterior and interior, appearing and disappearing. As such, it’s a dematerialised, ludic, fantastic and uncommon space, very far away from traditional construction.” Hans-Walter Müller.

Join the workshop with the architect, engineer and artist Hans-Walter Müller (*1935 in Worms, Germany), in the creation of inflatable structures that maintain their form solely through the power of air pressure. The single parts will be cut out of recycled sheets and then assembled. Ultimately, these airy and soaring volumes will be provided with an entrance and anchors to secure them from flying away. The inflatable pavilions will serve the Kids Culture Club as free space for various activities and will change their location over the next few years.
